

Project Initialization and Planning Phase

Date	01 July 2026
Team ID	
Project Name	Credit Card Approval Prediction
Maximum Marks	3 Marks

Define Problem Statements (Customer Problem Statement Template):

I am a customer applying for a credit card, a bank credit analyst, or a financial institution that processes a large number of credit card applications every day.

I'm trying to accurately determine whether a credit card applicant is eligible for approval based on financial, demographic, and credit-related information in order to speed up the application process, reduce manual effort, and make consistent lending decisions.

But the current manual evaluation process is time-consuming, prone to human error, and becomes increasingly difficult when handling thousands of applications with multiple financial risk factors.

Because there is no intelligent, automated system that can efficiently analyze applicant data and accurately predict credit card approval decisions using machine learning models in real time.

Which makes me feel frustrated by delays in decision-making, concerned about inconsistent approval outcomes, and limited in providing a faster and more reliable credit card application experience.

Problem Statement (PS)	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	A customer applying for a credit card.	Determine my likelihood of getting approved	I cannot accurately judge whether my financial profile meets the bank's approval criteria.	Banks evaluate multiple factors such as income, employment status, credit history, existing debt, and repayment	Uncertain about my eligibility and worried that my application may be rejected.
