

## Data Flow Diagram

|                      |                                 |
|----------------------|---------------------------------|
| <b>Date</b>          | 03 July 2026                    |
| <b>Team ID</b>       |                                 |
| <b>Project Name</b>  | Credit Card Approval Prediction |
| <b>Maximum Marks</b> | 2 Marks                         |

### Data Flow Diagram

Create a Data Flow Diagram (DFD) to show how data moves through your system - between external entities, processes, and data stores. Use the symbol legend below as a guide.

#### DFD Symbol Legend

| Symbol                                   | Name                   | Description                                                                                                          |
|------------------------------------------|------------------------|----------------------------------------------------------------------------------------------------------------------|
| <b>Oval / Rounded shape</b>              | <b>External Entity</b> | A person, organization, or system outside the project that sends or receives data (e.g., Customer, Payment Gateway). |
| <b>Rectangle with numbered header</b>    | <b>Process</b>         | An activity that transforms incoming data into outgoing data (e.g., Validate Request, Process Order).                |
| <b>Rectangle (solid fill, no number)</b> | <b>Data Store</b>      | A place where data is held for later use (e.g., Customer Database, Inventory).                                       |
| <b>Labeled arrow</b>                     | <b>Data Flow</b>       | The movement of data between entities, processes, and data stores, labeled with what data is being passed.           |

The diagram below illustrates the Data Flow Diagram (DFD) of the Credit Card Approval Prediction System, showing how data flows between external entities, processes, and data stores within the system.

## DATA FLOW DIAGRAM (LEVEL 1)

Credit Card Approval Prediction System

### Data Flows

- Customer → Receive User Input → **Applicant Details**
- Receive User Input → Data Preprocessing → **Validated Applicant Data**
- Data Preprocessing → ML Prediction → **Processed Features**
- Applicant Dataset → ML Prediction → **Historical Applicant Data**
- Trained ML Model → ML Prediction → **Prediction Model**
- ML Prediction → Display Prediction → **Approval/Rejection Result**
- Display Prediction → Customer → **Prediction Outcome**
